

Amendments to the Claims:

The listing of claims below will replace all prior versions, and listings, of claims in the above-referenced patent application.

1. (CURRENTLY AMENDED) A sealed conduit system, comprising:

- (a) a metal conduit having at least one end;
- (b) a housing having an inner chamber and an outer surface;
- (c) at least one free running hub coupled to said housing and the at least one end of said metal conduit; and
- (d) a flexible membrane disposed within said at least one free running hub.

2. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 1, further comprising means for purging any air, other gases or moisture, which may be trapped within the inner chamber of said housing.

3. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 2, wherein the purging means comprises a threaded port formed in the housing and a threaded plug, which is adapted to mate with said threaded port.

4. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 2, wherein the purging means comprises a spring-loaded ball-type valve.

5. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 1, wherein the housing is defined by a mid-section, which is substantially cylindrically shaped, and two free running hubs are disposed on, and mounted to, opposite ends of the mid-section.

6. (CURRENTLY AMENDED) A sealed conduit system according to claim 5, wherein the free running hubs are partially conical in shape and have an inside surface, which has a first set of female threads formed thereon for mating with the ends of the metal conduit.

7. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 6, wherein the inside surface of the free running hubs has a second set of female threads formed thereon for mating with the ends of the cylindrically-shaped mid-section and a shoulder adjacent to the second set of female threads.

8. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 7, wherein a flexible membrane is disposed on the inside surface of each of the free running hubs adjacent to the shoulder.

9. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 1, further comprising a polyurethane-based epoxy sealant compound disposed within said inner chamber.

10. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 9, wherein the polyurethane-based epoxy sealant compound comprises a polymer and a monomer.

11. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 1, wherein the housing is formed of an aluminum alloy.

12. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 1, wherein the flexible membrane is generally disk-shaped, formed of neoprene and has at least one opening for accommodating one or more cables.

13. (CURRENTLY AMENDED) A method of sealing a metal conduit, comprising the steps of:

- (a) coupling a sealing apparatus comprising a housing having an inner chamber and an outer surface, at least one free running hub having an inner surface, and a flexible membrane disposed within the at least one free running hub to at least one end of the metal conduit;
- (b) threading any wires or cables contained within said metal conduit through said flexible membrane; and
- (c) filling the inner chamber with a polyurethane-based epoxy sealant compound.

14. (CURRENTLY AMENDED) A method of sealing a metal conduit according to claim 13, further comprising the step of releasing any air, other gases, or moisture, which may be trapped in the inner chamber after it is filled with the epoxy sealant compound, through a purging means.

15. (CURRENTLY AMENDED) A sealed conduit system, comprising:

- (a) a metal conduit having at least one end;
- (b) a housing having an inner chamber and an outer surface;
- (c) at least one free running hub having an inner surface and a first and second coupling, wherein the first coupling comprises a first set of female threads formed on said inner surface for mating with the at least one end of the metal conduit and said second coupling comprises a second set of female threads formed on said inner surface for mating with an end of the housing; and
- (d) a flexible membrane disposed within said at least one free running hub.

16. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 15, further comprising means for purging any air, other gases or moisture, which may be trapped within the inner chamber of said housing.

17. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 15, wherein the housing is defined by a mid-section, which is substantially cylindrically shaped, and two free running hubs are disposed on, and mounted to, opposite ends of the mid-section.

18. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 15, wherein the flexible membrane is disposed adjacent to a shoulder formed in the inner surface of the at least one free running hub proximate said second coupling.

19. (CURRENTLY AMENDED) ~~An apparatus for sealing a conduit~~ A sealed conduit system according to claim 15, further comprising a sealant compound disposed within said inner chamber, which comprises a polyurethane-based epoxy.

20. (PREVIOUSLY PRESENTED) A sealed conduit system according to claim 15, wherein the flexible membrane is generally disk-shaped, formed of neoprene and has at least one opening for accommodating one or more cables.
